

Dear colleagues and friends,

On the threshold of the International exhibition “Gas. Oil. Technologies” and the Russian Petrochemical Forum I am pleased to welcome all participants, organizers and visitors on behalf of the Government of Bashkortostan Republic!

Our republic is a big oil-producing region, one of the major centers of chemistry and petrochemistry in the country. Our Bashkir petroleum products are in demand on the domestic and external markets, they are internationally competitive. Furthermore, we have remarkable advantages: developed technological and scientific capabilities, investment attractiveness and high productive capacities. All this makes our region interesting for specialists.

International exhibition “Gas. Oil. Technologies” is considered as one of the visiting cards of our republic. It has justly received international recognition and taken rightful place among major Russian industrial exhibition projects.

We are happy that Forum, held in Ufa, attracts attention of representatives from many countries, heads of federal and regional authorities, corporations and companies of the industry.

In May 2018 here will meet again the most respected experts, representatives of the leading brands of the industry. Ufa will again become a platform for the presentation of the latest developments.

The topics, proposed for discussion to Forum delegates, will offer an opportunity to discuss topical issues, exchange experience and findings of scientific research to specialists, scientists and authorities. Current situation will be assessed and guidance for progressive advance of this sphere of economy will be determined on the plenary meeting “Russia in world development trends of petrochemical industry”.

Efficient work to all on the platforms of the Forum and Exhibition!
Interesting meetings, reliable partners and high spirits!

Deputy Prime-minister of
Republic of Bashkortostan Government

Samedov F.A.
